PROJECTS

Call me guide — [Call Me Guide](#)

● A platform that connects tourists with experienced tour guides who have previously visited the destination. Users can **chat with guides (paid chat)**, **use advanced search** to find the right guide, and **post stories and updates on their profile**.

nahid — [ناهید](#)

● A modern and responsive website offering a vast collection of audiobooks and stories through a subscription model. Users can enjoy reading or listening to content and purchase books directly from the platform. The site is designed with an engaging UI, smooth animations, and a seamless user experience, built with Next.js/React and optimized for SEO and performance.

Nahid landing — [اندینگ بیج ناهید](#)

● A modern and responsive landing page designed to introduce a book reading application. The page features an engaging UI, smooth animations, and a user-friendly layout to highlight the app's key features, benefits, and call-to-action sections. Built with Next.js/React, Tailwind CSS, and optimized for SEO and performance.

baghban — [منو | رستوران باغبان](#)

● A web-based restaurant menu that allows users to **order food**, **reserve tables**, and **manage their cart**. The platform also includes **location-based services** to enhance the ordering experience.

mafia — [مافیا](#)

● A modern and responsive landing page designed to introduce a book reading application. The page features an engaging UI, smooth animations, and a user-friendly layout to highlight the app's key features, benefits, and call-to-action sections. Built with Next.js/React, Tailwind CSS, and optimized for SEO and performance.

Pd — [pd](#)

● A modern and responsive platform designed for a language learning class. The system offers a seamless experience for both students and instructors, featuring dedicated dashboards, interactive course management, and an efficient grading system. Students can register for classes, track their progress, and

securely pay tuition fees. Built with Next.js/React and Tailwind CSS, the platform ensures high performance, accessibility, and an intuitive user experience.

<https://pd-webrou.netlify.app/address>

negatrip—[negatrip](#)

● Developed a modern and responsive tour and trip website using React.js. Initially built as a simple JavaScript template, I converted it into a fully functional React application. The website features an intuitive user interface, optimized performance, and dynamic components to enhance user experience. It allows users to explore destinations, book trips, and access essential travel information seamlessly.

music—[musicDemo](#)

● Designed a modern and responsive landing page for selling music subscriptions. The page features a user-friendly interface, optimized performance, and clear call-to-action sections to boost user engagement and conversions. The design ensures an enjoyable and captivating experience for users, encouraging them to purchase a subscription.

asiatech—[يامدادالبرز](#)

● A modern and responsive landing page designed for selling **Asiatech internet packages**. It features a **user-friendly interface, optimized performance, and clear call-to-action sections** to enhance user engagement and conversions.
